WORK EXPERIENCE

IFCA MSC BHD

Software Engineer

August. 2025 – Current

Petaling Jaya, Selangor

- Built and enhanced frontend applications with React/JavaScript and backend services using Node.js and PostgreSQL, delivering client features and resolving production issues.
- Deployed, updated, and maintained application codebases on Linux servers to support consultant-led testing and real-world client usage.
- Applied Git-based version control workflows, including feature branching and merge conflict resolution, to enable parallel development and ensure codebase integrity across the team.

Aspen Spectra

Software Engineer

July. 2024 – August 2025

Mid Valley City, Kuala Lumpur

- Developed responsive front-end features in React, closely following Figma design specifications and UX flows.
- Adapted web designs for mobile in Figma and created interactive prototypes to showcase user flow and functionality.
- Connected React front-end to RESTful APIs, enabling dynamic data interaction between client and server.

EDUCATION

Carleton University

Bachelor of Computer Science (BCS), Major in Computer Science

June. 2023

Ontario, Canada

SKILLS

Programming Languages & Frameworks: JavaScript/TypeScript, HTML, TailwindCSS, React.js, and Node.js.

Database Management: Experienced with both relational (MySQL) and NoSQL (MongoDB) databases.

Tools: Figma (UI design), Postman (API testing and debugging), GitHub (source code management)

SIDE PROJECTS

Car Showcase Website | Strada

<https://stradamotors.vercel.app>

- Designed an interactive UI/UX prototype in Figma to guide development and achieve accurate implementation, producing a visually consistent final product.
- Implemented the website using React.js and Next.js to deliver a responsive interface and achieve seamless compatibility across desktop and mobile devices.
- Integrated images and videos along with animations using Tailwind CSS to boost user engagement and ensure responsive, smooth interactions across devices.
